9 Top Features of Photoshop

- 1. The Creation and Editing Interface** The most important thing to get you started with Photoshop is the interface. Photoshop has four ways to view images and create them. Through the main screen, you can open images, add layers, paint with brushes, and do your editing right there. You can also create new layers over existing images. You can see more details about Photoshop on the official site. **Layers** You can add new layers over existing images, or use the layers tab to view and edit the layers already in an image. You can manipulate the alpha channel, change the color of the layer, and even merge the layer with another one to make the new image from the images layers. **Brushes and Layers** Brushes is another way to create new images. You can use the Brushes palette to create new brushes, and add them to your image so you can paint with them. The Add Layer Over tool lets you drag any layer right over any image. There are a total of four tools, Layer, Mask, Paths, and Gradient. [More details about the various layers you can create with the various tools on the official site]
- 2. The Adjustment Layers** To view the effect of adjusting the color on the image, and the exact changes you want to make, you can add adjustment layers. These are normal layers that don't need to be selected or used. With adjustments, you can make color adjustments, invert the image, and use the Spot healing brush to make specific adjustments. With adjustment layers, you can create image variations and experiment with color effects to see how colors interact.
- 3. The Selection Brush** Selecting an area of the image can be done with the regular brush or the Spot Healing brush. The Spot Healing brush is an amazing tool that allows you to edit those hard to select areas in the image. It automatically finds the nearest pixel in the image that is the closest color to the current brush color. You can use the other brushes to paint on the area you've selected.

This web page describes the basic use of the Python Python API. For more information, see Python Programming Language; for a more tutorial-style introduction to Python, see Python Tutorial. For information on specific functions, see the API reference. For details on how to use the Python module, see the Python Language Reference. For information on the standard library and others, see the Python Library Reference. For more information, see the Python Wikipedia. Hello, Python world! I am a pseudo-tutorial- author -- like last time, you probably should learn Python 1st before you read anything else. I've been working on this document for some time, and I need to thank Laurie Colyer for writing the tutorials in the first place -- and working on the XML and the DocBook XML specs (and David Carlisle for magnum opus on python). If there are any problems or typos, please let me know. Thanks! Here is a link: An interactive Python interpreter is included in the Python standard distribution; it makes a great first Python application. To use it, start a command window and enter this: C:\> python Python 1.5.2 Notice that Python parses your command line for the name of the program you want to run. You can use Python for a variety of tasks: to play game, to control a graphics window, to convert pictures to MP3s, and so on. It also supports communicating with other programs (like a computerized Scrabble table, or a PDA). You can include libraries in Python to add to your power. Libraries are like extensions to the basic Python language. One of the best known examples is the standard library; it contains classes and functions to deal with various files (like HTML, PostScript, and GIF) and other types of documents. And, of course, you can define your own libraries -- and this is a good practice. The Python tutorial explains the basic facilities that you have at your disposal; simply browse around it. For a more readable introduction to Python, try one of the tutorials in the series, or look for a good beginners' book -- Python Tutorials. The Python Language Reference contains the standard library documentation and other general information. The documentation is on the web site; however, you can

Quality of life aspects of chronic obstructive pulmonary disease patients in Greece. Chronic obstructive pulmonary disease (COPD) is a major public health problem. Quality of life (QOL) has important implications in the evaluation of the prognosis and treatment of patients with COPD, but it is not usually taken into consideration in clinical trials, and only a few published studies evaluated the patients' QOL. The objective of this study is to evaluate the QOL of Greek patients with COPD with respect to functional state, coping mechanisms and health-related quality of life. This study had a cross-sectional design. Patients were recruited from the outpatient unit of Pulmonary Disease Unit, "NIKI" University General Hospital (Athens, Greece). A total of 68 patients with severe to very severe COPD (GOLD classification stage 4 or 5), aged 55.2 +/- 7.7 years (mean +/- SD), and a minimum of two visits in the last 3 months were included. All patients underwent a comprehensive assessment during the last visit (mean value of visits 3.7 +/- 1.7). Clinical evaluation included the determination of the forced expiratory volume in one second (FEV(1)), the forced vital capacity (FVC), and the arterial blood gas analysis. COPD Assessment Test, St. George Respiratory Questionnaire, and SF-36 Health Survey were employed to evaluate the QOL, coping mechanisms, and health status. Mean FEV(1) was 2.1 +/- 0.9 l (median 2.0), and mean FVC was 2.8 +/- 1.1 l (median 2.7), whereas the mean PaO(2) value was 53.8 +/- 10.8 mmHg and the mean PaCO(2) value was 45.3 +/- 4.8 mmHg. The mean CAT score was 21.4 +/- 5.1, while the mean SQOL score was 62.4 +/- 18.9. The mean St. George Respiratory Questionnaire score was 38.5 +/- 17.4, while the mean Physical Functioning (PF) and Role Physical (RP) scores were 20.0 +/- 8.1 and 37.2 +/- 12.0, respectively. The mean Mental Functioning (M) and Role Emotional (RE) scores were 40.0 +/- 11.5 and 46.0 +/- 11.3, respectively, whereas the mean Social Functioning (SF) score was 53.1
