“FIFA is a global phenomenon because of the immersive gameplay experience, and we are proud to introduce the next generation of our game that contains the best artificial intelligence, physics and visual experience in video games,” said Ian Livingstone, president of Electronic Arts. “There are no sequels. Electronic Arts is making new stories and introducing new characters through our new platform. We have built on our previous successes by delivering the deepest gameplay in FIFA history, and the world's most realistic player motion.” MORE: 5 things to look out for as FIFA 22 draws nearer The game features all the gameplay and team-oriented features that have made the FIFA franchise synonymous with football, including possession-based gameplay, a large number of authentic team and player traits, and real-time player identity while taking the game to a new level. Additionally, EA SPORTS™ FIFA 22 introduces “Incarnation,” the most realistic player animation ever in a video game. Incarnations are real players who have been motion captured by EA’s Scientifically Proven Team. Video game, motion capture and network programmers studied over two million hours of real human players to create more than 200 unique player animations, to make the players more lifelike, and to aid players in making better decisions when playing. “When you find that special player, you look to understand what makes them tick. To achieve this, we want to create the most complete player avatar,” said Dr. Peter Molyneux, Creative Director for FIFA, on Twitter. “This takes us into the digital world of Artificial Intelligence, allowing us to predict things about real human players that can’t be guessed.” 5. The highly anticipated EA SPORTS™ FIFA 22 Play Kit will be unveiled early next week. We'll share more in depth details on the best in class in-game features later in the month. We'll see you in the final moments before the launch of EA SPORTS™ FIFA 22 on September 15. MVP in Motions Control The Control Stick is the pinnacle of mobile game control, and now with the new motion controller, we know what it's been waiting for. FIFA’s iconic D-pad and four straight navigational buttons have always been the best foundation for mobile controllers, and with new innovations in physics, gameplay and AI, the next generation of mobile controls have arrived.
